Group: IT R&D Support

Task: Install and setup program NX

Example request: I need the NX software

Solution: Create helpdesk incident. After the incident is closed you can find NX in Start menu. You need to start the script: »file://ad.gorenje.si/shared/CAD/NastavitveUGNX/kopiraj_nastavitve_NX.cmd« (Windows key + R to open Run, paste the path and click OK).

In case of problems with the solution: Check if you have the right licence for NX and if you have floating licence check if there are free licences for your bundle on the site: »http://portal.gorenje.si/org/cadcam/SitePages/Zasedenost_licenc.aspx«.
