Group: IT R&D Support

Task: Install NX licence

Example request: NX does not open.

Solution: Click on start and scroll down to file »Siemens NX«, open program »Tool – Licensing Tool« (it needs to be version 1.2.1.0 for NX 2000). Click on Bundle Settings. Click on »NX Mach 1 Design (Floating)«. Click on the right arrow button. Click Apply in the bottom right corner.

In case of problems with the solution: Maybe all licenses are already taken and you need to wait. You can check it on: »website for licence usage«.
